Questions

As people ask questions, I'll post responses here and push them to the shared folder. You can email me these questions or create an "issue" in the 'uips-stat-share' repository. Note that this is different than the 'explorations' repository – we should probably try to keep that relatively clutter-free.

1   Readings

Before considering non-linear relationships, make sure that you have a good understanding of linear relationships and specifically how OLS fits its line. A closer reading (and practice) with the *Kaplan* and *James et al* textbooks should be useful here. Chapter 3 and the "Lab" section of the *James et al* book should be especially helpful, as it also includes some topics that are useful for this week.
